

HOW IT WORKS

EASY TO USE, EASY TO DEPLOY

1. Purchase a Qualified IP Phone

You can choose from a wide range of manufacturers and models to fit your needs including Aastra, Polycom, and others. You can purchase the phones from us or from a qualified distributor.

2. Connect Your Phone to a High-Speed Internet Connection

Simply connect to the internet using your existing DSL, Cable, T-1, or Ethernet connection or we can install a new connection for you. All of the phones do not need to be on the same connection which is great for businesses with multiple locations and also work-from-home employees.

3. Start Calling

Once you are connected, you can make and receive calls as you normally do. You can log into the online portal to control your features and re-route calls if needed. Our hosted solution provides your business with the greatest flexibility, functionality, reliability, in a package that fits any budget.
